

Session Report

Session ID: c913e022-5180-4714-b445-5c2da89f121a
Date: 2025/12/21 15:05:10

Participant Information

User: N/A
Device: Test Device

Training Summary

Average Hz 0.0	Duration 10 min	AI Score 0
--------------------------	---------------------------	----------------------

AI Stability Analysis

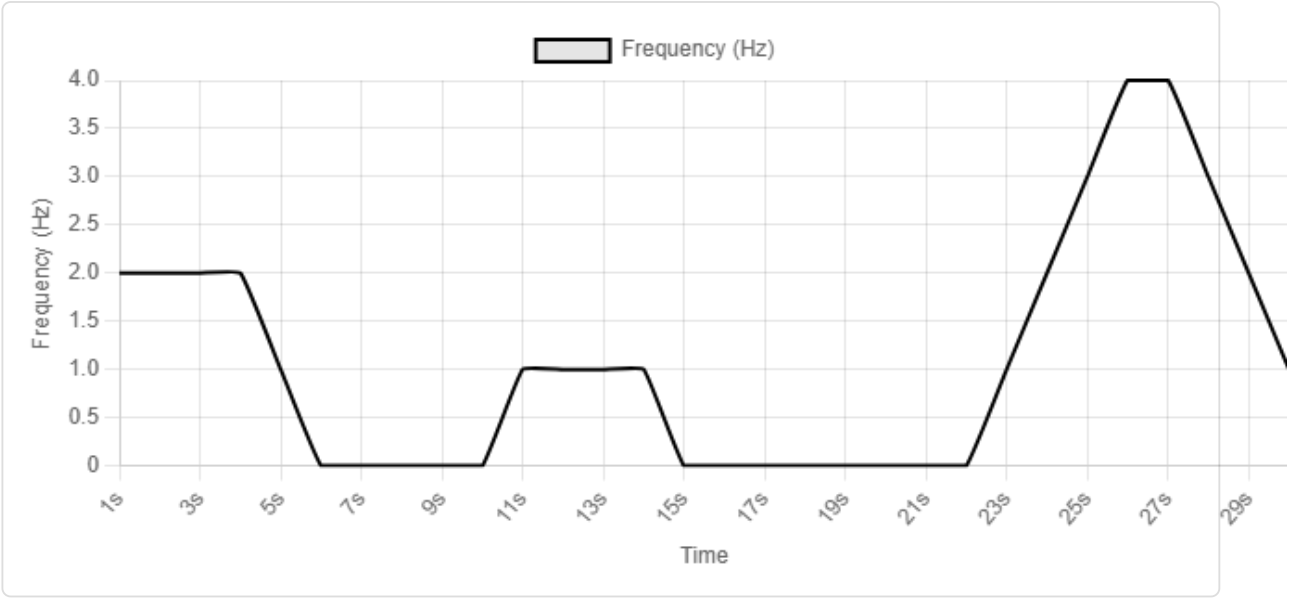

Stability Score: 0 / 100

Based on training data analysis, continue focusing on frequency stability to maintain training quality.

Training Recommendations:

- Check device status to ensure normal operation
- Adjust training posture to ensure body stability
- Reduce training intensity and focus on basic frequency control
- Ensure a quiet and stable training environment with minimal distractions

Frequency Curve

Frequency Interpretation

Low frequency vibration is typically used for recovery, relaxation, and circulation improvement.

Training Recommendation

Recommended to continue low-frequency sessions for recovery days or post-intensive workouts.
